DETAILED ACTION

Allowable Subject Matter

1. Claims 13, 14 and 18 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 8-12 and 15-17 rejected under 35 U.S.C. 103(a) as being unpatentable over Sikonia (2002/0076543) in view of Laxman et al. (2002/0172766).

Regarding Claims 8-12 and 15-17, Sikonia discloses layered dielectric nanoporous materials and methods of producing same where a layered low dielectric constant nanoporous material is produced that comprises a first layer juxtaposing a substrate, a second nanoporous layer juxtaposing the first layer, and an additional layer juxtaposing the second layer by the following method: depositing a first layer on a substrate, depositing a second layer that is nanoporous and that juxtaposes the first layer, treating the second layered material to produce nanoporosity and depositing at least one additional layer that partially juxtaposes the second layer. Sikonia fails to disclose the required precursor and the treatment method. However, Laxman et al. disclose a low dielectric constant thin films and chemical vapor deposition method

of making same where in claims section the required precursor and treatment method are disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required precursor and the treatment methods in Sikonia as taught by Laxman et al. in order to manufacture a semiconductor structure with higher reliability.
